

Sea Buckthorn Hand/Skin Sanitizing Cream

high protection,
optimal care

Sea Buckthorn Hand/Skin Sanitizing Cream

coresatin[®] Sea Buckthorn Hand/skin Sanitizing Cream is enriched by seabuckthorn. The content of sea buckthorn oil in this formulation is slightly higher than the other formulations.

coresatin[®] Sea Buckthorn Hand/Skin Sanitizing Cream targets eliminating the harmful microorganisms where a vicious circle occurs between microbial activity and skin barrier function, in a balanced way without damaging the skin.

Contains

- 0.04% CHDG that has a significant proven efficacy and activity against the most common germs with a non-drying formula.
- skin protection agents, vitamins and soothing ingredients for an extended protection.
- non-greasy and non-sticky formula that can rapidly be absorbed by your skin.
- disinfecting agent-CHDG that provides an antimicrobial protective effect for approximately 6 hours.

- It meets the requirements of the, [EN 1276](#), [EN 1650](#) and [EN 1500](#).
- Registered by the FOPH in Switzerland as a biocidal product registered number [CHZN438401002](#)
- Biocide PTL. before use, read the label and the product information. use biocides with caution.
- Our sanitizing preparations are available as LEAVE-ON products not as RINSE-OFF.
- Dermatological tests have confirmed excellent skin compatibility.

Helps to

- wipe out the germs without removing the good bacteria.
- protect your skin from infections and contaminations.
- provide gentle protection and relieving care for long-term use.
- mildly sanitize the skin with its ready to use formula.
- prevent irritations, and protect, rejuvenate, soften and moisturize your skin.

Sea Buckthorn;

- has linoleic acid which is an important constituent of the skin ceramides-a crucial compound group in the lipid barrier structure of the skin. It will lead to increased skin permeability, sensitivity and dryness if the linoleic acids are replaced by other fatty acids like oleic acids in the skin ceramides.
- is rich in a-linoleic and linoleic acids, which are found to be the optimally essential fatty acids (EFA). EFA prevents UV-based hyperpigmentation and reduce age-dependent skin blemishes and irregular skin colours, ^(4,5) whereas EFA deficiency causes flaking on the skin. ^(1, 2, 3)
- contains active ingredient, Omega 7 or Palmitoleic acid- a natural compound of the skin and known to have an effect in moisturizing and restoring the skin.

Trusted by doctors

Gentle disinfection

Tissue friendly

Ready to use

Extended protection

Useful information

- People who have atopic dermatitis are particularly prone to skin infections and also seem to have a reduced ability to fight common microorganisms.
- For the protection of the skin with atopic dermatitis, it is essential not to use harsh antiseptic agents that make the skin dry and irritated.
- For the prevention of development of consequent skin reactions and concerns as a result of radiotherapy, topical sanitizers and moisturizers tailored to effectively clean the damaged skin without killing beneficial microorganisms on the skin can be highly useful.
