Safety Evaluation

Product: **Hydroderm Akut-Gel**
Formulation Reference Code: **BEN 14-03-1381-9**

With regard to the standard toxicological profile of ingredients, their chemical structure and the level of exposure according to the principles of good laboratory practice tending to the warnings and conditions of intended and foreseen use, the product Hydroderm Akut-Gel, formulation reference code BEN 14-03-1381-9, has been qualified as

harmless to the health

and complies with the Cosmetic-Directive (EU) Nr. 1223/2009.

This evaluation is based on:

The toxicological profile of ingredients

available toxicological / dermatological documentation of raw ingredients and assessments of finished products including microbiological testing, poisons information centre reports, safety data documentation, legal regulations, general binding international evaluations, government institutes' and associations' recommendations and marketing feedback

Chemical structure

Company-specific formula/ finished product test regulations, raw materials test regulations, physical/chemical evaluations, as necessary

Level of exposure

is determined by the conditions of use, as specified in the product directions. Non-contentious and legal words of caution as well as other sources of information are to be referred to, to avoid risks, providing they are a part of the product make-up

Warning notices:

- «Avoid contact with eyes, open wounds or mucous membranes. »
- «Don't use for babies and young children. »
